To the Reviewing Officer

Re: First-hand account of Taren Oryan's platform engineering contributions

My name is Liven Sayer. I previously managed platform development at Arven Node Platforms, where I supervised teams working on reliability and performance in distributed software services. Taren Oryan reported directly to me as a core platform engineer on a team of seven.

I know Oryan's work first-hand from design discussions, code reviews, testing reports, and documented technical decisions. Oryan identified and investigated response delays under peak service demand. Oryan then proposed the technical approach, reviewed the tradeoffs with me, and assumed responsibility for implementing the changes.

Our performance records show that the ninety-fifth percentile response time fell from 480 milliseconds to 310 milliseconds under the same test load. Over six weeks, Oryan redesigned request-queue behavior and made the performance tests reproducible. The overall improvement belongs to the team, but design records and code history establish Oryan's central contribution.

A second contribution was a testing guide that allowed new engineers to reproduce those conditions before changing the system. It gave the team a consistent basis for identifying performance regressions in later releases. I observed Oryan carry the work beyond an idea through implementation, documentation, and team adoption.

I understand Oryan's proposed work concerns improved load management and observability across additional software platforms. The earlier project provides a concrete illustration of Oryan's ability to analyze a technical problem and deliver a usable solution. I cannot predict the outcome of that future endeavor, and I do not intend this letter as a guarantee.

The code-change history, performance test summary, technical-decision log, and team responsibility record listed below support these observations independently of my letter. They also distinguish Oryan's role from that of the team as a whole. I would be available to clarify my direct observations of this project.

Sincerely,

Liven Sayer

Former Platform Development Manager
