To the Reviewing Officer

Re: Conditional interest in evaluating Elya Naren's energy monitoring method

I am Ender Nalvi, Technical Development Director at Neravan Industrial Applications. Our organization evaluates energy consumption and early fault indicators in motor assemblies used in manufacturing operations. This letter describes our current, limited interest in a method proposed by Elya Naren.

We need to distinguish energy-use deviations under changing loads across work shifts. We first reviewed Naren's sensor-comparison approach in a technical presentation and later examined an illustrative data exercise covering six motor assemblies. Our engineers held two discussions with Naren about the method's data requirements and limits.

In the sample exercise, the estimated energy loss associated with identified operating intervals appeared 11 percent lower under the proposed calculation than under our earlier control approach. This is not a verified plant-wide saving. It is a comparison within the sample data, and the method has not yet been validated in our production environment.

We requested a draft evaluation plan covering data access, comparison procedures, and trial responsibilities. If technical review and internal approvals are satisfactory, we intend to consider a limited field trial. We have not entered into a binding purchase agreement, committed to a definitive contract, or guaranteed deployment.

Our interest shows that the approach addresses a specific need identified by a potential industrial user. If its operation can be validated in future settings, similar users might find the method worth examining. We do not claim that broader adoption or national-level outcomes have already occurred.

The technical meeting notes, sample evaluation summary for six motor assemblies, and unsigned trial-scope draft listed below support the nature and stage of our discussions. They also show the limitations of this statement of interest. This letter is not intended to substitute for an executed contract.

Sincerely,

Ender Nalvi

Technical Development Director
Neravan Industrial Applications
