To the Reviewing Officer

Re: Technical observations from my research collaboration with Lina Orvel

I am Mira Nilfen, a researcher in molecular measurement methods at the Sovira Research Unit for Biological Methods. My research examines laboratory measurement reproducibility and sources of variation in experimental protocols. I worked directly with Lina Orvel on a joint protocol-development study.

My knowledge of Orvel's contribution comes from project-planning meetings, laboratory notebooks, and blinded sample comparisons. We aimed to reduce variability when measuring the same biological marker repeatedly. Orvel redesigned sample-preparation steps, while I managed the blinded comparison protocol.

In a study involving 96 laboratory samples, the relative variation between repeated measurements declined from 14 percent to 8 percent. The result applies only to the stated samples and experimental conditions. It does not establish improved clinical diagnosis, patient outcomes, or successful deployment beyond this study.

Orvel contributed more than an initial idea. Orvel drafted the standardized preparation protocol and maintained a separate issue log for deviations observed during testing. Those records gave our team an auditable way to revisit procedural changes and repeat the comparison.

Orvel intends to test the protocol under different laboratory conditions and continue work on the comparability of biological measurements. Such methodological work may have potential benefits for public-health research, although this study does not show that clinical benefits have already been achieved. The completed steps nonetheless document relevant progress toward the proposed endeavor.

The blinded comparison table, versioned protocol records, and laboratory issue log identified below support my first-hand observations independently of this letter. They also distinguish Orvel's individual contribution from my role in the collaboration. I provide this assessment on the basis of those specific records and my direct involvement.

Sincerely,

Mira Nilfen

Researcher, Molecular Measurement Methods
